Biological Significance	DPP10 is a protein that in humans is encoded by the DPP10 gene. This gene encodes a single-pass type II membrane protein that is a member of the S9B family in clan SC of the serine proteases. This protein specific voltage-gated potassium channels and alters their expression and biophysical properties.
Cross-Reactivity	Human
Immunogen	DPP10 antibody was raised in mouse using a full length recombinant protein of human DPP10 (NP_065919) produced in HEK293T cells, as the immunogen.
Preparation and Storage	Store at 4 degree C for short term storage. Aliquot and store at -20 degree C for long term storage. Avoid repeated freeze/thaw cycles.
