Biological Significance	PIK3AP1 is involved in the activation of phosphoinositide 3-kinase (PI3K) in B-cells and in natural killer (NK) cells. It couples B-cell antigen receptor (BCR) to PI3K activation by providing a docking site for the PI3K subunit PIK3R1, which contributes to B-cell development. It seems to have a complementary role with CD19 in PI3K activation. May be involved in the survival of mature B cells via activation of REL.
Cross-Reactivity	Human
Immunogen	PIK3AP1 antibody was raised in mouse using a full length recombinant protein of human PIK3AP1 (NP_689552) produced in HEK293T cells, as the immunogen.
Preparation and Storage	Store at 4 degree C for short term storage. Aliquot and store at -20 degree C for long term storage. Avoid repeated freeze/thaw cycles.
