Biological Significance	KHK is a kethexokinase that catalyzes conversion of fructose to fructose-1-phosphate. The product of this gene is the first enzyme with a specialized pathway that catabolizes dietary fructose. KHK encodes the gene kethexokinase that catalyzes conversion of fructose to fructose-1-phosphate. The splice variant presented encodes the highly active form found in liver, renal cortex, and small intestine, while the alternate variant encodes the lower activity form found in most other tissues.
Cross-Reactivity	Human
Immunogen	KHK antibody was raised in mouse using a full length recombinant protein of human KHK (NP_000212) produced in HEK293T cells, as the immunogen.
Preparation and Storage	Store at 4 degree C for short term storage. Aliquot and store at -20 degree C for long term storage. Avoid repeated freeze/thaw cycles.
