Biological Significance	Troponin I (TnI), along with troponin T (TnT) and troponin C (TnC), is one of 3 subunits that form the troponin complex of the thin filaments of striated muscle. TnI is the inhibitory subunit; blocking actin-myosin interactions and thereby mediating striated muscle relaxation. The TnI subfamily contains three genes: TnI-skeletal-fast-twitch, TnI-skeletal-slow-twitch, and TnI-cardiac. TNNI3 is the TnI-cardiac protein and is exclusively expressed in cardiac muscle tissues.
Cross-Reactivity	Human, Dog, Monkey
Immunogen	TNNI3 antibody was raised in mouse using a full length recombinant protein of human TNNI3 (NP_000354) produced in E Coli as the immunogen.
Preparation and Storage	Store at 4 degree C for short term storage. Aliquot and store at -20 degree C for long term storage. Avoid repeated freeze/thaw cycles.
