ADDITIONAL INFORMATION

Related Product Information for beta-EP elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Beta-Endorphin (also known as B-EP) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human B-EP antibody. B-EP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human B-EP Antibody is added and binds to B-EP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated B-EP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human B-EP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
