

## Human proteasome (prosome, macropain) activator subunit 1 (PA28 alpha) ELISA Kit | PSME1 elisa kit

Human Proteasome activator complex subunit 1, PSME1 ELISA Kit

CATALOG #  
**AAA112438**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

proteasome (prosome; macropain) activator subunit 1 (PA28 alpha); Human Proteasome activator complex subunit 1; PSME1 ELISA Kit; Human Proteasome activator complex subunit 1 (PSME1) ELISA kit; IFI5111; MGC8628; PA28A; PA28alpha; REGalpha; 11S regulator complex alpha subunit; 29-kD MCP activator subunit; activator of multicatalytic protease subunit 1; interferon gamma up-regulated I-5111 prot; PSME1 elisa kit

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                     |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of Human PSME1. No significant cross-reactivity or interference between Human PSME1 and analogues was observed.                                                                                                                                   |
| Sequence Length         | 233                                                                                                                                                                                                                                                                                                                       |
| Samples                 | Serum, plasma, tissue homogenates, Cell lysates                                                                                                                                                                                                                                                                           |
| Assay Type              | Sandwich                                                                                                                                                                                                                                                                                                                  |
| Detection Range         | 39 pg/ml-2500 pg/ml                                                                                                                                                                                                                                                                                                       |
| Sensitivity             | 9.75 pg/ml                                                                                                                                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): CV% is less than 8%<br>Three samples of known concentration were tested twenty times on one plate to assess.<br>Inter-assay Precision (Precision between assays): CV% is less than 10%<br>Three samples of known concentration were tested in twenty assays to assess. |
| Detection Wavelength    | 450 nm                                                                                                                                                                                                                                                                                                                    |
| Sample Volume           | 50-100ul                                                                                                                                                                                                                                                                                                                  |
| Preparation and Storage | Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions.                                                                                                                                                                                         |

| Related Product Information for PSME1 elisa kit | <b>Principle of the Assay:</b> This assay employs the quantitative sandwich enzyme immunoassay technique. Antibody specific for PSME1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PSME1 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PSME1 is added to the wells. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PSME1 bound in the initial step. The color development is stopped and the intensity of the color is measured. |
