ADDITIONAL INFORMATION

Related Product Information for SHBG elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with goat-anti-rabbit antibody. Standards or samples are added to the appropriate microtiter plate wells with an antibody specific for SHBG and Horseradish Peroxidase (HRP) conjugated SHBG. The competitive inhibition reaction is launched between with HRP labeled SHBG and unlabeled SHBG with the antibody. A substrate solution is added to the wells and the color develops in opposite to the amount of SHBG in the sample. The color development is stopped and the intensity of the color is measured.
