ADDITIONAL INFORMATION

Related Product Information for TSH elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with an antibody specific to TSH. Standards or samples are added to the appropriate microtiter plate wells with Biotin-conjugated TSH. A competitive inhibition reaction is launched between TSH (Standards or samples) and Biotin-conjugated TSH with the pre-coated antibody specific for TSH. The more amount of TSH in samples, the less antibody bound by Biotin-conjugated TSH. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Substrate solution is added to the wells and the color develops in opposite to the amount of TSH in the sample. The color development is stopped and the intensity of the color is measured.
