

## Mouse phenylalanine hydroxylase ELISA Kit | PAH elisa kit

Mouse Phenylalanine-4-hydroxylase, PAH ELISA Kit

CATALOG #  
**AAA113078**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

phenylalanine hydroxylase; Mouse Phenylalanine-4-hydroxylase; PAH ELISA Kit; Mouse Phenylalanine-4-hydroxylase (PAH) ELISA kit; PH; PKU; PKU1; ; PAH elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                                                                                                                                                                                    |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of mouse PAH. No significant cross-reactivity or interference between mouse PAH and analogues was observed.                                                                                                                                                                      |
| Sequence Length         | 453                                                                                                                                                                                                                                                                                                                                                      |
| Samples                 | Serum, plasma, tissue homogenates, Cell lysates                                                                                                                                                                                                                                                                                                          |
| Assay Type              | Sandwich                                                                                                                                                                                                                                                                                                                                                 |
| Detection Range         | 23.5 pg/ml -1500 pg/ml.                                                                                                                                                                                                                                                                                                                                  |
| Sensitivity             | The minimum detectable dose of mouse PAH is typically less than 5.8 pg/ml. The sensitivity of this assay, or Lower Limit of Detection (LLD) was defined as the lowest protein concentration that could be differentiated from zero. It was determined the mean O.D value of 20 replicates of the zero standard added by their three standard deviations. |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess.                                                                                                                                                                                                         |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): CV%<10%. Three samples of known concentration were tested in twenty assays to assess.                                                                                                                                                                                                                  |
| Preparation and Storage | Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions.                                                                                                                                                                                                                        |

| Related Product Information for PAH elisa kit | <b>Principle of the Assay:</b> This assay employs the quantitative sandwich enzyme immunoassay technique. Antibody specific for PAH has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PAH present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PAH is added to the wells. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PAH bound in the initial step. The color development is stopped and the intensity of the color is measured. |
