**Intended Uses:** This sandwich kit is for the accurate quantitative detection of rat Interleukin 24 (also known as IL-24) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with rat IL-24 antibody. IL-24 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated rat IL-24 Antibody is added and binds to IL-24 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated IL-24 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of rat IL-24. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
