Related Product Information for MCT elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Mast Cell Tryptase (also known as MCT) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse MCT antibody. MCT present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse MCT Antibody is added and binds to MCT in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated MCT antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse MCT. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
