Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Sestrin 2 (also known as SESN2) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse SESN2 antibody. SESN2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse SESN2 Antibody is added and binds to SESN2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SESN2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse SESN2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
