ADDITIONAL INFORMATION

Related Product Information for XOD elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Xanthine Oxidase (also known as XOD) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse XOD antibody. XOD present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse XOD Antibody is added and binds to XOD in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated XOD antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse XOD. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
