Intended Uses: This sandwich kit is for the accurate quantitative detection of Rabbit Fibrinogen (also known as Fbg) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rabbit Fbg antibody. Fbg present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rabbit Fbg Antibody is added and binds to Fbg in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Fbg antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rabbit Fbg. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
