Intended Uses: This sandwich kit is for the accurate quantitative detection of Rabbit Lactoferrin (also known as LTF/LF) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rabbit LTF/LF antibody. LTF/LF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rabbit LTF/LF Antibody is added and binds to LTF/LF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated LTF/LF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rabbit LTF/LF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
