Intended Uses: This sandwich kit is for the accurate quantitative detection of Rabbit Basic Fibroblast Growth Factor (also known as BFGF) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rabbit BFGF antibody. BFGF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rabbit BFGF Antibody is added and binds to BFGF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated BFGF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rabbit BFGF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
