Intended Uses: This sandwich kit is for the accurate quantitative detection of Fish Aromatase (also known as ARO) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Fish ARO antibody. ARO present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Fish ARO Antibody is added and binds to ARO in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ARO antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Fish ARO. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
