Intended Uses: This sandwich kit is for the accurate quantitative detection of Fish Macrophage Colony-Stimulating Factor (also known as M-CSF) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Fish M-CSF antibody. M-CSF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Fish M-CSF Antibody is added and binds to M-CSF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated M-CSF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Fish M-CSF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
