ADDITIONAL INFORMATION

Related Product Information for NGAL elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Monkey NGAL antibody. NGAL present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Monkey NGAL Antibody is added and binds to NGAL in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated NGAL antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Monkey NGAL. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Monkey neutrophil gelatinase-associated lipocalin (also known as NGAL) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
