Related Product Information for LDH elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Chicken Lactate Dehydrogenase (also known as LDH) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Chicken LDH antibody. LDH present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Chicken LDH Antibody is added and binds to LDH in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated LDH antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Chicken LDH. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
