Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep Alpha 1 Macroglobulin (also known as A1-MG) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep A1-MG antibody. A1-MG present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep A1-MG Antibody is added and binds to A1-MG in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated A1-MG antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep A1-MG. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
