ADDITIONAL INFORMATION

Related Product Information for LBP elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep LBP antibody. LBP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep LBP Antibody is added and binds to LBP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated LBP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep LBP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep lipopolysaccharide binding protein (also known as LBP) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
