

## Bovine Estrogen (E) ELISA Kit

Bovine Estrogen (E) ELISA Kit

CATALOG #  
**AAA122172**

REACTIVITY  
**Bovine**

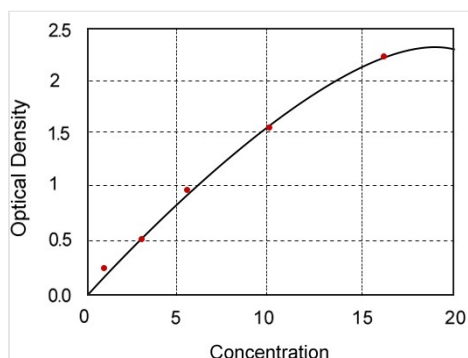

### PRODUCT SYNONYMS

Estrogen (E); Bovine Estrogen (E) ELISA Kit; Estrogen (E) elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Bovine                                                                   |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 1ng/L - 400ng/L                                                          |
| Sensitivity             | 0.51ng/L                                                                 |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for Estrogen (E) elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of Bovine Estrogen (also known as E) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Bovine E antibody. E present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Bovine E Antibody is added and binds to E in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated E antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Bovine E. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
