ADDITIONAL INFORMATION

Related Product Information for Abeta1-40 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Canine Abeta1-40 antibody. Abeta1-40 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Canine Abeta1-40 Antibody is added and binds to Abeta1-40 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Abeta1-40 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Canine Abeta1-40. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Canine Amyloid beta peptide 1-40 (also known as Abeta1-40) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
