Intended Uses: This sandwich kit is for the accurate quantitative detection of Bird Melatonin (also known as MT) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Bird MT antibody. MT present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Bird MT Antibody is added and binds to MT in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated MT Antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Bird MT. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
