ADDITIONAL INFORMATION

Related Product Information for GR elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Chicken GR antibody. GR present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Chicken GR Antibody is added and binds to GR in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GR antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Chicken GR. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Chicken Glucocorticoid receptor (also known as GR) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
