Intended Uses: This sandwich kit is for the accurate quantitative detection of Chicken Vascular Endothelial Cell Growth Factor (also known as VEGF) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Chicken VEGF antibody. VEGF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Chicken VEGF Antibody is added and binds to VEGF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated VEGF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Chicken VEGF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
