Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep Ceruloplasmin (also known as CP/CER) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep CP/CER antibody. CP/CER present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep CP/CER Antibody is added and binds to CP/CER in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated CP/CER antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep CP/CER. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
