ADDITIONAL INFORMATION

Related Product Information for LTC4 elisa kit	Principle of the Assay: This kit is a Enzyme-Linked Immunosorbent Assay (ELISA). Add samples to the pre-coated plate. Then add biotinylated antigen. The antigens in the samples compete with the biotinylated antigen to bind to the capture antibody and incubate. Unbound antigen is washed away during a washing step. An avidin-HRP is then added and then incubate. Unbound avidin-HRP is washed away during a washing step. TMB Substrate is then added and color develops. The reaction is stopped by addition of acidic stop solution and color changes into yellow that can be measured at 450 nm. The intensity of the color developed is inversely proportional to the concentration of LTC4 in the sample. The concentration of LTC4 in the sample is then determined by comparing the O.D. of the samples to the standard curve. Intended Uses: This competitive ELISA kit is for the quantification of Leukotriene C4(also known as LTC4) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
