ADDITIONAL INFORMATION

Related Product Information for ACP2 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep 8-Hydroxy-desoxyguanosine (also known as 8-OHDG) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep 8-OHDG antibody. 8-OHDG present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep 8-OHDG Antibody is added and binds to 8-OHDG in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated 8-OHDG antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep 8-OHDG. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
