ADDITIONAL INFORMATION

Related Product Information for UCP2 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat Mid-regional Pro-adrenomedullin (also known as MR-ProADM) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat MR-ProADM antibody. MR-ProADM present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat MR-ProADM Antibody is added and binds to MR-ProADM in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated MR-ProADM antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat MR-ProADM. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
