ADDITIONAL INFORMATION

Related Product Information for SDF-1 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Monkey SDF-1 antibody. SDF-1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Monkey SDF-1 Antibody is added and binds to SDF-1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SDF-1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Monkey SDF-1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Monkey Stromal cell derived factor 1 (also known as SDF-1) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
