ADDITIONAL INFORMATION

Related Product Information for FX elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Canine F10 antibody. F10 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Canine F10 Antibody is added and binds to F10 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated F10 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Canine F10. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Canine Coagulation Factor 10 (also known as F10) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
