Intended Uses: This sandwich kit is for the accurate quantitative detection of Canine Coagulation Factor 12 (also known as F12) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Canine F12 antibody. F12 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Canine F12 Antibody is added and binds to F12 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated F12 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Canine F12. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
