ADDITIONAL INFORMATION

Related Product Information for alpha2-MG elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat A2M antibody. A2M present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat A2M Antibody is added and binds to A2M in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated A2M antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat A2M. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat Alpha-2-macroglobulin (also known as A2M) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
