ADDITIONAL INFORMATION

Related Product Information for CIC elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Monkey CIC antibody. CIC present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Monkey CIC Antibody is added and binds to CIC in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated CIC antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Monkey CIC. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Monkey circulating immune complex (also known as CIC) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
