ADDITIONAL INFORMATION

Related Product Information for Glutathione peroxidase elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Chicken GPX antibody. GPX present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Chicken GPX Antibody is added and binds to GPX in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GPX antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Chicken GPX. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Chicken Glutathione peroxidase (also known as GPX) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
