ADDITIONAL INFORMATION

Related Product Information for Hpt/HP elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Porcine HP antibody. HP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Porcine HP Antibody is added and binds to HP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Porcine HP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Porcine Haptoglobin;zonulin (also known as HP) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
