ADDITIONAL INFORMATION

Related Product Information for CD63 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human CD63 antibody. CD63 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human CD63 Antibody is added and binds to CD63 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated CD63 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human CD63. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human cluster of differentiation 63 (also known as CD63) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
