ADDITIONAL INFORMATION

Related Product Information for EMBP elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human EMBP antibody. EMBP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human EMBP Antibody is added and binds to EMBP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated EMBP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human EMBP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human eosinophil granule major basic protein (also known as EMBP) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
