ADDITIONAL INFORMATION

Related Product Information for GBA elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of human Glucosylceramidase (also known as GBA) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human GBA antibody. GBA present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human GBA Antibody is added and binds to GBA in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GBA antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human GBA. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
