ADDITIONAL INFORMATION

Related Product Information for MID1 elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of human Midline-1 (also known as MID1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human MID1 antibody. MID1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human MID1 Antibody is added and binds to MID1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated MID1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human MID1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
