ADDITIONAL INFORMATION

Related Product Information for WNT9A elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human WNT9A antibody. WNT9A present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human WNT9A Antibody is added and binds to WNT9A in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated WNT9A antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human WNT9A. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Protein Wnt-9a (also known as WNT9A) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
