ADDITIONAL INFORMATION

Related Product Information for TPMT elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Thiopurine S-methyltransferase (also known as TPMT) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human TPMT antibody. TPMT present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human TPMT Antibody is added and binds to TPMT in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TPMT antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human TPMT. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
