ADDITIONAL INFORMATION

Related Product Information for GnIH elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Fish GnIH antibody. GnIH present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Fish GnIH Antibody is added and binds to GnIH in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GnIH antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Fish GnIH. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Fish Gonadotropin-inhibitory Hormone (also known as GnIH) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
