ADDITIONAL INFORMATION

Related Product Information for AKR1C4 elisa kit	Principle of the Assay: The Picokine™ Human AKR1C4 Pre-Coated ELISA (Enzyme-Linked Immunosorbent Assay) kit is a solid phase immunoassay specially designed to measure Human AKR1C4 with a 96-well strip plate that is pre-coated with antibody specific for AKR1C4. The detection antibody is a biotinylated antibody specific for AKR1C4. The capture antibody is a monoclonal antibody from mouse, the detection antibody is a biotinylated polyclonal antibody from goat. The kit contains recombinant Human AKR1C4 with immunogen: Expression system for standard: E.coli, Immunogen sequence: M1-Y323. The kit is analytically validated with ready to use reagents. To measure Human AKR1C4, add standards and samples to the wells, then add the biotinylated detection antibody. Wash the wells with PBS or TBS buffer, and add Avidin-Biotin-Peroxidase Complex (ABC-HRP). Wash away the unbound ABC-HRP with PBS or TBS buffer and add TMB. TMB is substrate to HRP and will be catalyzed to produce a blue color product, which changes into yellow after adding acidic stop solution. The density of the yellow product is linearly proportional to Human AKR1C4 in the sample. Read the density of the yellow product in each well using a plate reader, and benchmark the sample wells' readings against the standard curve to determine the concentration of Human AKR1C4 in the sample.
