

General Cyclic Adenosine Monophosphate (cAMP) ELISA Kit | cAMP elisa kit

General Cyclic Adenosine Monophosphate (cAMP) ELISA Kit

CATALOG #
AAA129719

REACTIVITY
General

PRODUCT SYNONYMS

Cyclic Adenosine Monophosphate (cAMP); General Cyclic Adenosine Monophosphate (cAMP) ELISA Kit; c-AMP; 3'-5'-Cyclic Adenosine Monophosphate; Adenosine Cyclophosphate; cAMP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of calcipotriol. No significant cross-reactivity or interference between calcipotriol and analogues was observed.
Assay Type	Competitive Inhibition
Samples	Serum, Plasma, Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids
Detection Range	246.9-20,000pg/mL
Sensitivity	90.9pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level calcipotriol were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level calcipotriol were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for cAMP elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of calcipotriol in serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to calcipotriol has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled calcipotriol and unlabeled calcipotriol (Standards or samples) with the pre-coated antibody specific to calcipotriol. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of calcipotriol in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of calcipotriol in the sample.
Product Categories/Family for cAMP elisa kit	Signal transduction; Metabolic pathway

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
