Detection Range	13.7-10,000pg/mL
Sensitivity	5.9pg/mL
Application	Chemiluminescent immunoassay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Protein Disulfide Isomerase A2 (PDIA2) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Protein Disulfide Isomerase A2 (PDIA2) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for PDIA2 clia kit	The microplate provided in this kit has been pre-coated with an antibody specific to Protein Disulfide Isomerase A2 (PDIA2). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Protein Disulfide Isomerase A2 (PDIA2). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Protein Disulfide Isomerase A2 (PDIA2) level in the sample or standard.;
