

## Human Platelet Derived Growth Factor D (PDGFD) CLIA Kit | PDGFD clia kit

Human Platelet Derived Growth Factor D (PDGFD) CLIA Kit

CATALOG #  
AAA129990

REACTIVITY  
Human

### PRODUCT SYNONYMS

Platelet Derived Growth Factor D (PDGFD); Human Platelet Derived Growth Factor D (PDGFD) CLIA Kit; PDGF-D; IEGF; SCDGF-B; Spinal Cord Derived Growth Factor B; Iris-expressed growth factor; Platelet-derived growth factor D; receptor-binding form/latent form; PDGFD clia kit

### PRODUCT SPECIFICATIONS

| Reactivity                                        | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Platelet Derived Growth Factor D (PDGFD). No significant cross-reactivity or interference between Platelet Derived Growth Factor D (PDGFD) and analogues was observed.                                                                                                                                                                                                                                          |
| Sequence Length                                   | 364                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Assay Type                                        | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for PDGFD clia kit | The microplate provided in this kit has been pre-coated with an antibody specific to Platelet Derived Growth Factor D (PDGFD). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Platelet Derived Growth Factor D (PDGFD). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Platelet Derived Growth Factor D (PDGFD) level in the sample or standard.; |
