PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of Growth Differentiation Factor 11 (GDF11). No significant cross-reactivity or interference between Growth Differentiation Factor 11 (GDF11) and analogues was observed.
Sequence Length	407
Assay Type	Double-antibody Sandwich
Samples	Serum, Plasma, Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids
Detection Range	1.37-1,000pg/mL
Sensitivity	0.55pg/mL
Application	Chemiluminescent immunoassay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Growth Differentiation Factor 11 (GDF11) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Growth Differentiation Factor 11 (GDF11) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for GDF11 clia kit	The microplate provided in this kit has been pre-coated with an antibody specific to Growth Differentiation Factor 11 (GDF11). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Growth Differentiation Factor 11 (GDF11). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Growth Differentiation Factor 11 (GDF11) level in the sample or standard.;
